The American Cancer Society National Lung Cancer Roundtable (ACS NLCRT), [GO2 for Lung Cancer](#) (GO2), [Radiology Health Equity Coalition](#) (RHEC), and [American College of Radiology](#) (ACR) have partnered once again for the **second annual National Lung Cancer Screening Day** ("National LCS Day") on **Saturday, November 11, 2023**. We are promoting this lifesaving event to screen more individuals and raise awareness about lung cancer screening. As part of a key initiative of Lung Cancer Awareness Month, and in acknowledgment of National LCS Day falling on the Veterans Day holiday, the ACS NLCRT, ACR, RHEC, and GO2 have partnered with the [Veterans Administration](#) on this campaign in order to salute our Veterans by increasing outreach and awareness to our veteran population, in turn saving more lives. As part of Lung Cancer Awareness Month and in partnership with the ACR, RHEC, and GO2 we are promoting this lifesaving event to screen more individuals and raise awareness about lung cancer screening. The President's Cancer Panel recommends lung cancer screening as the single most effective strategy for reducing mortality from the disease and closing the gap to improve health equity and access. To achieve this goal, the President's Cancer Panel has charged individuals, health systems, and communities with communicating and promoting lung cancer screening.

NATIONAL LUNG CANCER SCREENING DAY

How to Open your Lung Screening Center on Saturday, November 11th for Lung Cancer Screening Day!

You have made the decision to support Lung Cancer Screening Day. Here are some tips to help you accomplish a successful Saturday open:

1. Talk to your Radiology Manager or upper management to get approval for the extra day of screening.
 - Decide what time frame you want to open (i.e. 9 AM – 5 PM; morning only, afternoon only, late morning/early afternoon)
2. Once approved by upper management, ensure you have a willing CT technologist for each unit you intend to use for LCS.
3. Ensure your scheduling staff is aware you will be opening on Saturday, November 12th, so they can offer the patients that day.
 - Check with IT that the scheduling system is open for booking appointments
4. Ensure you have appropriate staff
 - Examples:
 - Registration
 - CT Tech (already mentioned in #2 above)
 - Maintenance/Housekeeping staff
 - Security

QUIT NOW

KENTUCKY

Talk to your patients about tobacco.

Ask about their tobacco use

Advise them to quit

Refer them to Quit Now Kentucky

The U.S. Public Health Service Clinical Practice Guidelines and the Guide to Community Preventive Services both recommend proactive telephone counseling through quitlines as an effective method to help people stop using tobacco. Quit Now Kentucky is a free statewide tobacco cessation service featuring proactive telephone coaching, web-based services, and text messaging.

Quit Now Kentucky offers:

- Support and advice from an experienced quit coach
- A personalized quit program with self-help materials
- Information on tobacco dependence for health care professionals
- The latest information about medications
- Online resources (websites, interactive sites)
- Text messaging and other smart phone applications
- Online charting for those using website cessation
- Social support available online
- Pregnancy/postpartum protocols with incentives
- Four weeks of free NRT for uninsured clients, public housing residents, and Medicare recipients who enroll in coaching
- Direct eReferrals from Health System EHR capability

Quit Now Kentucky services are available FREE to everyone in Kentucky age 15 and over who wants to break their addiction to tobacco. Services are available in English, Spanish or Arabic at the point of contact. Counseling in other languages is available free through a third party translation service. Deaf and hard-of-hearing services are also available.

Quitline hours of operation are flexible to meet nearly everyone's needs. Counselors are available every day from 7:00 am to 1:00 am EST (6:00 am to midnight CST).

Ask every patient about tobacco use.

Advise patients to quit with tailored, personalized messages.

Refer them to Quit Now Kentucky.

- For telephone counseling, patients can call 1-800-QUIT-NOW.
- For online cessation services or more information about quitting, patients can visit www.QuitNowKentucky.org
- To have the quitline contact your patient, go to <https://www.quitnowkentucky.org/en-US/Just-Looking/Health-Professional/How-to-Refer-Patients>

Referral forms and eReferral forms are available at www.QuitNowKentucky.org.

Lung Cancer Screening with Low-dose Computed Tomography

Shared Decision-making Visit: A Guide for Clinicians

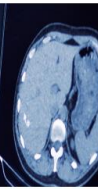

Lung Cancer Screening Eligibility Criteria

While the American Cancer Society reviews new scientific evidence to update their annual lung cancer screening guideline, health care providers and people at increased risk for lung cancer are advised to follow the recently updated recommendations of the US Preventive Services Task Force, the American Academy of Family Physicians, or the American College of Chest Physicians. These organizations recommend yearly low-dose CT (LDCT) lung cancer screening only for adults who meet each of the following criteria:

- Age: 50 to 80 years old and in fairly good health (Medicare covers screening up to age 77. Private insurance covers screening up to age 80.)
- Smoking status: People who currently smoke or have quit smoking within the past 15 years
- Tobacco smoking history of at least 20 pack-years: One pack-year = smoking one pack per day for one year; 1 pack = 20 cigarettes
- Asymptomatic: no signs or symptoms of lung cancer
- Have completed a shared decision-making visit with their health care provider. The patient received information about lung cancer screening and has decided to be screened.
- Have received a written order. For the initial LDCT lung cancer screening service, the patient must have received a written order for LDCT during a lung cancer screening counseling and shared decision-making visit, furnished by a physician (as defined in Section 1861(r)(1) of the Social Security Act) or qualified non-physician practitioner (meaning a physician assistant, nurse practitioner, or clinical nurse specialist as defined in §1861(aa)(5) of the Social Security Act).

Do You Need Lung Cancer Screening?

How to know if lung cancer screening is right for you

Screening for lung cancer uses a test that helps find abnormal areas in the lungs that may be cancer. Research shows that screening certain people at higher risk may help decrease their risk of dying from lung cancer.

If you currently smoke or have quit in the last 15 years, are 50 to 80 years old and are in fairly good health, you might benefit from screening for lung cancer with a yearly low-dose CT scan (LDCT). The American Cancer Society recommends screening for certain people at higher risk for lung cancer. Talk to a health care provider about your risk of lung cancer, and about the possible benefits, limitations, and harms of getting tested for early lung cancer.

How an LDCT scan works

An LDCT scan, or low-dose computed tomography scan, is the test used to screen for lung cancer.

This test shows pictures of a slice, or cross-section, of your lungs. It shows more detail than an x-ray. An LDCT scan can help find abnormal areas that might be cancer and can show a tumor's shape and size. These problems often look like spots on the scan.

LDCT scans expose people to a small amount of radiation with each test. Talk to your doctor about this if you are thinking about your risk for lung cancer and whether to be screened.

What it's like to get an LDCT scan

The scan is painless and usually takes a few minutes once you're in the machine. You may be asked to undress and put on a gown. You'll need to take off any clothing or objects with metal, such as zippers, underwire bras, jewelry, or piercings.

A radiology technologist does the LDCT scan. Let the technologist know if you have a pacemaker or other implanted medical devices. You would still be able to have an LDCT scan, but extra care would be taken.

The scanner is a big, ring-shaped machine. You lie on a thin, flat table that slides back and forth inside the hole in the middle of the scanner. You'll be asked to hold your breath for a short time. You'll hear buzzing and clicking as the scanner switches on and off. The scan is painless and takes just a few minutes.

You'll be alone in the exam room during the LDCT scan, but the technologist will be able to see, hear, and talk to you at all times.

The machine has size restrictions for patients. People who are very overweight may have trouble getting an LDCT scan.

FOR RELEASE: September XX, 2023

FOR MORE INFORMATION, CONTACT:

(HEALTH SYSTEM), (CONTACT EMAIL ADDRESS)

The American Cancer Society Partners with XX to Bring Awareness to Early Lung Cancer Detection with a Screening Day on November 11, 2023

(CITY), Saturday XX, 2023 – With lung cancer claiming the highest mortality rate worldwide, (Health System) is partnering with the American Cancer Society National Lung Cancer Roundtable (ACS NLCRT), [GO2 for Lung Cancer](#) (GO2), [Radiology Health Equity Coalition \(RHEC\)](#), and [American College of Radiology \(ACR\)](#) to raise greater awareness about the importance of lung cancer screening. Lung Cancer Screening Day allows clinics to be open on Saturday, November 11, making it easier for those unable to access screening during the week. A number of clinics and hospitals will participate in Screening Day. To find a location near you please go to [Cancer Screening | Resources and FAQ | American Cancer Society](#) or the [Lung Cancer Screening Locator Tool | American College of Radiology \(acr.org\)](#)

QUOTE FROM HOSPITAL SYSTEM

Why Lung Cancer Screening is so important.

The President’s Cancer Panel recommends lung cancer screening as the single most effective strategy for reducing mortality from the disease and closing the gap to improve health equity and access.

Lung cancer can affect anyone, but tobacco use and exposure to radon are two of the highest risk factors. Unfortunately, lung cancer continues to have the highest mortality rate of cancers worldwide. Lung cancer screening can find cancers earlier when they are easier to treat.

Lung cancer claims the lives of 127,000 Americans every year, but only 1 in 10 people at a higher risk get screened.

Open hours on Saturday for lung cancer screening increases access to those who may be eligible but are unable to get away during the week. Talk to your physician today to see if you are eligible.

Encourage others to learn more about **National Lung Cancer Screening Day** and the importance of early detection **by visiting XXXX**. Let's work together to create more lung cancer survivors!
